

Gerry Hill

Gerry has 30 years background of health, with early involvement in intensive care nursing during her time in the UK. Following her undergraduate degree in health science, she has been involved with vascular ultrasound and research for over 22 years within the department of surgery, university of Otago. Gerry has particular interest in venous disease and aortic aneurysms. She obtained her Masters degree 2011 looking into the role of venous perforators within a normal population. She is actively involved in the DMU board for ASUM and defines herself as truly passionate about everything vascular and extending the understanding in the area of vascular research.
