Bulletin*

The final President's message from Matthew  
Andrews

CEO reflects on ASUM's past and future

Everything you need to know for the 2008  
Annual Scientific Meeting in New Zealand

A brief history of an ultrasound pioneer

Upper extremity venous thrombus is becom-  
ing more prevalent. The use of ultrasound for  
detecting thrombus and other upper extremity  
pathology is a safe and proven method

The authors investigate the usefulness of  
recording the presence of, and measuring,  
the fetal nose at the time of the nuchal trans-  
lucency assessment and at the 18–20 week  
scan as a screening tool for Trisomy 21

The authors report a case of LBWC with-  
out craniofacial defect or body stalk anomaly  
diagnosed during the first trimester using 2D  
and 3D ultrasound including volume contrast  
imaging techniques

Within the last 20 years, the use of diagnostic  
ultrasound has extended into the field of zoology

New council-approved policy

The best of the current ultrasound articles  
summarised

ASUM members have been active in Vietnam  
and Korea
